5. CLARIFYING REMARKS:

A newer and, for the most part, speculative development which still continues at a fairly rapid pace. Dwellings are of modest size located upon small plots which are well cared for. Some of the new construction is of exceptionally attractive design. A favorite section among lenders it is, nevertheless, reported that some of the new development is overpriced and some "jerry" built. As a whole, the area rates a high "Blue".

Abstract:

Beginning in 1935, the federal Home Owners' Loan Corporation worked with local mortgage lenders to evaluate the "trend of desirability" in residential areas in Hartford and over 200 other cities. The HOLC portrayed its appraisal report in a color-coded map with the highest grade (A) in green and the lowest grade (D) in red. This government agency considered not only housing conditions, but also the "social status of the population," and downgraded neighborhoods with non-white, immigrant, and poor residents. In later decades, these actions became associated with the discriminatory practice of "redlining."

As 2010, as part of the "On the Line" project, MAGIC and Professor Dougherty collaborated to digitize these historical resources and transform them into an interactive map. The appraisal report (on legal size paper) and two large folded maps (Hartford-West Hartford, and East Hartford) were scanned at the National Archives and then pieced together. Textual and numerical report data were entered into a spreadsheet, and the map was geo-referenced and digitized to create a GIS shapefile.
